CHIUW Community/Panel Discussion

May 23\textsuperscript{th}, 2014
Safe Harbor Statement

This presentation may contain forward-looking statements that are based on our current expectations. Forward looking statements may include statements about our financial guidance and expected operating results, our opportunities and future potential, our product development and new product introduction plans, our ability to expand and penetrate our addressable markets and other statements that are not historical facts. These statements are only predictions and actual results may materially vary from those projected. Please refer to Cray's documents filed with the SEC from time to time concerning factors that could affect the Company and these forward-looking statements.
Discussion Format

- Questions assembled from input of interested parties
  - Chapel enthusiasts and Cray execs

- This is intended to be a whole group discussion
  - Panelists are here to jump start the discussion
What are the three most important things that Chapel and the community need to do in the next four years in order to increase the user base and maximize the chances of success? Alternatively, what are the top three things currently inhibiting the rate of Chapel adoption?

contributed by: Pete Ungaro, Peg Williams
Is there a *killer* application space for Chapel (potentially outside of HPC) with strong community support that could help build support for the language? If so, how do we tap into that community?

*contributed by: Rob Neely*
Are there lessons from the adoption (or failure) of other largely community-supported languages (e.g. Python, Ruby) that Chapel could learn from to attract wider support, and avoid becoming a footnote in the history of programming languages? Do you believe this is possible in the HPC field?

contributed by: Rob Neely, Jens Brietbart
What future capabilities of expected, presumed, and rumored large scale computing systems (supercomputers, clusters, cloud, etc.) do you see directly impacting the ability of Chapel to provide acceptable performance?

contributed by: Richard Barrett, Thomas Van Doren
What model of collaboration should we adopt as we move Chapel to become a community-controlled project? Should there be separate models for the language specification and the actual implementation?

contributed by: Tom Hildebrandt
Domain Specific Languages (DSLs) have regained popularity recently. Could Chapel and its multi-resolution philosophy be used as the foundation for building DSLs?

contributed by: Peg Williams
